

.015 Chaise Lounge

Design by DESIGN BASAGLIA + ROTA NODARI

A highly sophisticated style for this designer piece, ideal not just for urban spaces but for home outdoor settings too. Combine it with a comfortable eco-leather cushion. Bent pipe structure, diameter 18mm, made of stainless steel or polyester powder coated steel tube and hot-dip galvanised steel. Ready-equipped for fastening to the ground with bolts or joined together using steel plates.

Urban spaces, large public areas and shopping centres have become integral parts of our living habits: more and more time is spent in these places. Hence the idea of turning them into a domestic environment, as comfortable as possible, where social life can develop in full comfort.

This concept has led Diemmebi to design URBANTIME, the collection for street furniture and large areas.

Zeroquindici.015, completely made of metal, is characterised by a simple round pipe which can be bent and coupled in several ways, thus taking different shapes and allowing countless classical compositions or unconventional ones such as the Sofa.

The product range is designed for outdoor areas however it does not disdain indoor spaces, such as shopping centres, large covered surfaces, lounges, airports, railway stations, bus stations.

As for all the whole production of the company, special attention is devoted to the environment: the line is conceived to be completely recyclable and feature materials that don't need maintenance.
