

Atomo - 4 legs Low Table

The Atomo project stems from the need to create a table capable of fitting into any environment and becoming its focal point. Lightweight and sturdy, the aluminium structure consists of a die-cast ground base onto which the legs supporting the top are attached. Every shape detail, such as the refined connection between the base and the tubular elements, responds to an aesthetic research that appropriates the most advanced production technology to outline a balanced and contemporary product in style. The wide range of colours and many finishes make it possible to meet the requirements of any space, be it a refined interior or an elegant outdoor space.
