

Capa Chair

The Capa chair blends a solid wood base with the harmonious form of pressed plywood in the seat and the backrest. Thanks to its construction method, the chair is very light and has no fasteners or metal parts on the non-upholstered version. It is available non-upholstered, fully upholstered, or with an upholstered seat only. The chair is stackable. A chair trolley can carry up to 14 non-upholstered and 11 upholstered Capa chairs. The Capa collection also includes an armchair and a bar stool in two height variations.
