

Ditto Back to Back

Ditto Back to Back is part of the Ditto modular seating system, designed for flexible hospitality and commercial environments. Built from a refined set of modules, the system allows designers and operators to configure booth seating layouts that adapt to changing floorplans.

The back-to-back configuration maximises seat utilisation while maintaining circulation flow. With no defined “rear”, Ditto can be positioned centrally within a space, making it ideal for restaurants, cafés, hotel lobbies and breakout areas.

Constructed with FSC-certified plywood and moulded foam, Ditto combines durability with long-term seating comfort. The internal structure is engineered for commercial use and repeated daily service environments.

HOW DITTO WORKS

Each module carries a defined unit length, allowing runs to be extended, mirrored or grouped to suit the required seating capacity. Ditto can be specified as single booths, back-to-back seating, curved groupings or full modular layouts.

Custom upholstery and framing finishes allow the system to integrate into a wide range of hospitality interiors.

TO BEGIN YOUR LAYOUT PLANNING, WE WILL REQUIRE:

- Your selected Ditto configuration
- The intended seating capacity and layout
- Preferred upholstery and framing finishes

SPECIFICATIONS

Leadtime	8 – 12 weeks
Material	Upholstered
Price	More than 500
Origin	Made in Australia
