

Nimm B-4590

The Nimm chair combines the inviting character of a wooden dining chair with the durability and functionality of a contract chair. Soft backrest details and rounded legs create a friendly and timeless form. Its distinctive seat shape allows for stacking, both in the armless version and with armrests.

The Nimm family is ideal for restaurant spaces, especially the armrest version, while the standard model fits seamlessly into modern office canteens or cafés. Its natural material and soft form also make it a perfect addition to hotel rooms and home interiors.

The collection includes two chair variants – with or without armrests – as well as barstools in two heights. Each version is available with a smooth or upholstered seat. Made from solid beech and plywood, the chair comes in a full range of stains and lacquer finishes.
