

#### **PORTLAND STONE - XENOLITH**

Suitable for internal and external use, we offer a diverse range of Compact Laminate tops.

We offer customisation of sizing, corner and edge profiles.

#### **Material Properties**

**Xenolith** is a premium line of compact laminate utilising the same materials with a greater thickness and coloured core composite. The unique coloured core allows for exposed ends with no join lines, matching the top colour of choice.

Compact laminate is the ultimate in long-lasting, low maintenance decorative panels, for the most demanding hard working environments. It has the following properties:

- Tough and durable
- Smooth, stone-like surface texture
- Matching coloured coreAttractive colour finishes
- Impervious to water
- Outstanding stain and wear resistance

#### The Australian Forestry Standard (AFS)

The Australian Forestry Standard (AFS), known as AS 4708, serves as the primary management standard within the Australian Forest Certification Scheme (AFCS). This comprehensive scheme encompasses a vast expanse of over 7.8 million certified hectares, spanning both native forests and plantations throughout Australia. Complementing the AFS, the AFCS also incorporates the AS 4707 Chain of Custody Standard, a vital component for monitoring the traceability of forest and wood products as they traverse the supply chain.

These standards, officially designated as Australian Standards®, enjoy the recognition of Standards Australia and hold

international acclaim through the endorsement and mutual recognition by PEFC. Products that proudly display the AFS label originate from independently certified organizations, each distinguishable by their unique certification number featured alongside the AFS trademark logo.

#### Programme for the Endorsement of Forest Certification schemes (PEFC)

In 1999, the Programme for the Endorsement of Forest Certification schemes (PEFC) was inaugurated. PEFC functions as a platform facilitating the reciprocal acknowledgment of reputable national or regional forest certification programs. These programs are meticulously designed to adhere to globally accepted criteria for sustainable forest management. Notably, PEFC oversees the certification of an expansive 209 million hectares of forests, establishing it as the preeminent forest certification scheme globally in terms of scale and scope.

#### How it's made

Compact Laminate is constructed with layers of Kraft paper, dipped in resin and dried. These layers are then sandwiched between laminated top and bottom sheets, compressed and baked. A process called polymerisation melds them all together creating a solid-core panel that is an extra tough durable laminate.

High-Pressure Laminates (HPL & CL) are resistant to most common chemicals and substances.
