

Scholar - with wood cover

Scholar - with Wood Cover is a commercial **auditorium seating chair** engineered for lecture theatres, performing arts centres and conference venues where durability and acoustic control are critical. The perforated timber outer back panel is designed to assist with controlled sound reflection and improved acoustic balance within tiered seating environments. Built for high-traffic public interiors, Scholar combines architectural timber detailing with a robust commercial-grade structure. It delivers consistent performance across large seating runs while maintaining a refined, professional finish.

ACOUSTIC PERFORMANCE

The perforated wood back cover contributes to room acoustic management by supporting balanced sound distribution in education and performance spaces. This makes Scholar well suited to universities, schools, theatres and civic auditoriums that require both visual warmth and functional acoustic performance.

COMFORT & CONSTRUCTION

- High-density moulded foam for long-session seating comfort
- Commercial-grade frame for heavy-use environments
- Silent seat return mechanism to reduce operational noise
- Timber outer back panel for durability and architectural finish
- Suitable for tiered lecture theatres and auditorium layouts

IDEAL APPLICATIONS

- University lecture theatres
- School halls and education facilities
- Performing arts venues
- Conference and civic auditoriums

Scholar with Wood Cover balances technical performance, acoustic contribution and clean architectural detailing — delivering a reliable auditorium seating solution for education and public environments across Australia.
