

# Series Disposal System

The SERIES Liquid Disposal System delivers an intelligent, high-capacity solution for efficient liquid and waste management in high-traffic terminals.

It features an advanced stainless steel strainer and 20-gallon antimicrobial tank, designed to collect and store liquids safely. Separate chutes for bottles and general waste ensure streamlined sorting, while removable PE liners and a welded steel frame make cleaning and maintenance easy.

Each unit is built from durable phenolic panels with a Silestone top, providing long-term resistance to wear in public environments. The tank sits on a dolly with lockable castors for effortless drainage, and standard bold graphic decals improve user visibility and wayfinding.

**Key Specifications:**

- Top: Silestone – Urban Crush, Lime Delight, Concrete Pulse
- Body: Phenolic panels in Platinum Storm
- Internal Frame: Powder-coated tubular steel
- Liquid Tank: UV-stabilised antimicrobial PE, 20-gallon capacity, translucent and graduated
- Strainer: Stainless steel, removable for easy cleaning
- Compliance: Meets FDA standards

Built to withstand the demands of airports and transport hubs, the SERIES combines functionality, hygiene, and refined design in one complete waste management system.
